<a href="http://www.lienkapomoci.sk/">http://www.lienkapomoci.sk/</a>	Error: Unknown host	1

#### O tomto SEO faktore:

Chyby 4xx často poukazujú na problém na webovej stránke. Napríklad, ak máte na stránke nefunkčný odkaz a návštevníci naň kliknú, môže sa zobrazit chyba 4xx. Je dôležité tieto chyby pravidelne monitorovať a opravovať, pretože môžu mať negatívny vplyv a môžu znižovať autoritu vášho webu v očiach používateľov.

### Zdroje so stavovým kódom 5xx (0 ks)

Výborne! Vaše webové stránky neobsahujú chyby 5xx.

---

**O tomto SEO faktore:**

Chybové správy 5xx sa odosielajú, keď má server problém alebo chybu. Je dôležité pravidelne sledovať tieto chyby a vyšetrovať ich príčiny, pretože môžu mať negatívny vplyv a znižovať autoritu stránok v očiach vyhľadávacích nástrojov.

✔ **404 stránka je nastavená správne (Yes)**

Dobrá práca! Chybová stránka vášho webu 404 je nastavená správne.

---

**O tomto SEO faktore:**

Vlastná 404 chybová stránka vám pomôže udržať používateľov na webe. V optimálnom svete by mala informovať používateľov o tom, že hľadaná stránka neexistuje, a mala by obsahovať prvky ako váš súbor Sitemap HTML, navigačný panel a vyhľadávacie pole. Čo je dôležitejšie, na stránke s chybou 404 by sa mal vrátiť kód odpovede 404.

Podľa Konzoly Google Search Console:

„Vrátenie iného kódu ako 404 alebo 410 pre neexistujúcu stránku môže byť problematické. Po prvé, vyhľadávacím nástrojom povie, že na tejto adrese URL je skutočná stránka. Výsledkom je, že táto adresa URL môže byť prehľadaná a jej obsah indexovaný. Z dôvodu času, ktorý Googlebot strávi na neexistujúcich stránkach, vaše jedinečné URL adresy nemusia byť objavené tak rýchlo alebo často navštevované a môže to ovplyvniť indexovanie vašej stránky. Odporúčame vám vždy vrátiť hodnotu 404 (nenájdená) alebo kód odpovede 410 (neexistuje) v odpovedi na žiadosť o neexistujúcu stránku.“

✔ **robots.txt file (Yes)**

Výborne! Na vašom webe je k dispozícii súbor robots.txt.

---

**O tomto SEO faktore:**

Súbor robots.txt je automaticky prehľadaný, keď Googlebot dorazí na váš web. Tento súbor by mal obsahovať príkazy pre roboty, ako napríklad stránky, ktoré by sa mali alebo nemali indexovať. Ak chcete zakázať indexovanie nejakého obsahu (napríklad stránok so súkromným alebo duplikovaným obsahom), použite príslušné pravidlo v súbore robots.txt. Viac informácií o týchto pravidlách nájdete na adrese <http://www.robotstxt.org/robotstxt.html>.

Upozorňujeme, že príkazy umiestnené v súbore robots.txt sú skôr návrhmi ako absolútnymi pravidlami, ktoré majú roboti dodržiavať. Neexistuje žiadna záruka, že niektorý robot nebude kontrolovať obsah, ktorý ste zakázali.“

✔ **.xml sitemap (Yes)**

Well done! An .xml sitemap is present on your website. Remember to resubmit it to search engines each time you make changes to it.

---

**O tomto SEO faktore:**

Súbor sitemap XML by mal obsahovať všetky webové stránky, ktoré chcete indexovať, a mal by byť umiestnený na webovej stránke v základnej adresárovej štruktúre (napr. <http://www.vasastranka.sk/sitemap.xml>). Vo všeobecnosti slúži na podporu indexácie. Mali by ste ho aktualizovať zakaždým, keď na svoj web pridáte nové stránky. Okrem toho, by súbor sitemap mal dodržiavať predpísaný syntax.

Mapa stránok (sitemap.xml) vám umožňuje nastaviť prioritu každej stránky a povedať vyhľadávacím nástrojom, ktoré stránky majú indexovo prehľadávať častejšie (t. j. častejšie sa aktualizujú). Naučte sa, ako vytvoriť súbor .xml na stránke <http://www.sitemaps.org/>.

❗ **Blokovaná indexácia zdrojov (3 ks)**

Niektoré zdroje vašich stránok nie sú indexované. Odporúča sa znova skontrolovať súbor robots.txt a uistiť sa, že všetok váš užitočný obsah je indexovaný a nie je omylom blokovaný.

<a href="#">authorize</a>		Robots.txt
<a href="https://www.orange.sk/prihlasenie/prihlasenie/redirect">https://www.orange.sk/prihlasenie/prihlasenie/redirect</a>	N/A	Disallowed Robots.txt
<a href="https://www.orange.sk/prihlasenie/session.gif">https://www.orange.sk/prihlasenie/session.gif</a>	N/A	Disallowed Robots.txt

#### O tomto SEO faktore:

Indexovanie prostriedkov môže byť obmedzené niekoľkými spôsobmi:

- v súbore robots.txt;
- podľa tagu Noindex X-Robots;
- podľa tagu Noindex Meta.

Každý z nich predstavuje riadok kódu HTML, ktorý hovorí, ako by mal prehliadač spracovávať určité zdroje na webe. Značka konkrétne povie indexovému prehliadačovi, ak nemajú povolené indexovať stránku alebo zdroj, nasledovať jeho odkazy a / alebo archivovať jeho obsah. Preto sa uistite, že všetok váš jedinečný a užitočný obsah je k dispozícii na indexovanie.

### ✔ Stránka s www a bez www je nastavená správne (Yes)

Dobrá práca! Verzie www a non-www na vašom webe boli zlúčené.

#### O tomto SEO faktore:

Zvyčajne sú webové stránky dostupné v názve domény aj bez výrazu „www“. Zlúčenie oboch adries URL vám pomôže zabrániť vyhľadávacím nástrojom indexovať dve verzie webových stránok.

Aj keď indexovanie obidvoch verzií nespôsobí penalizáciu, stanovenie jednej z nich ako priority je najlepšou praxou, čiastočne preto, že pomáha zúžiť hodnotu SEO z odkazov na jednu spoločnú verziu. Svoju aktuálnu primárnu verziu môžete vyhľadať alebo zmeniť v súbore .htaccess. Odporúča sa tiež nastaviť preferovanú doménu v službe Google Search Console.

### ✔ Problémy s verziami stránok HTTP / HTTPS (No)

Na vašom webe nie sú žiadne problémy s duplikáciou obsahu HTTP / HTTPS.

#### O tomto SEO faktore:

Používanie bezpečného šifrovania sa dôrazne odporúča pre mnoho webových stránok (napríklad pre tie, ktoré uskutočňujú transakcie a zhromažďujú citlivé informácie o používateľovi.) V mnohých prípadoch však webmasteri čelia technickým problémom pri inštalácii certifikátov SSL a nastavovaní verzií HTTP / HTTPS na webe.

V prípade, že používate neplatný certifikát SSL (napr. nedôveryhodný alebo ktorého platnosť vypršala), väčšina webových prehliadačov zabráni používateľom navštíviť vaše stránky tak, že im zobrazí upozornenie „nezabezpečené pripojenie“.

Ak verzie HTTP a HTTPS na vašom webe nie sú správne nastavené, obe sa môžu indexovať pomocou vyhľadávacích nástrojov a spôsobiť duplicitné problémy s obsahom, ktoré môžu oslabiť hodnotenie vašich webových stránok.

### ✘ Stránky s presmerovaním 302 (26 stránky)

Na vašej stránke boli nájdené 302 presmerovania. Prosím skontrolujte, že použitie týchto presmerovaní je správne.

URL stránka	Stránka presmerovania	Nájdené na

#### O tomto SEO faktore:

302 presmerovanie je dočasné, takže ním neprechádza žiadny link juice. Ak ich použijete namiesto 301, vyhľadávacie nástroje môžu pokračovať v indexovaní starých URL adries a nové považovať ako duplikáty. Alebo môžu rozdeliť popularitu spojenia medzi týmito dvomi verziami, a tým poškodiť hodnotenie vyhľadávania. Z tohto dôvodu sa neodporúča používať 302 presmerovanie, ak natrvalo presúvate stránku alebo web. Namiesto toho sa držte presmerovania 301, aby ste zachovali link juice a zabránili duplicitě s obsahom.

### **📄 Stránky s presmerovaním 301 (8 stránky)**

Na vašom webe sa nachádza 301 presmerovanie. Skontrolujte všetky svoje presmerovania 301 a uistite sa, že odkazujú na relevantné stránky a či sú správne nastavené.

URL stránka	Stránka presmerovania	Nájdene na
<a href="http://www.orange.sk/e-shop/">http://www.orange.sk/e-shop/</a>	<a href="https://www.orange.sk/e-shop/">https://www.orange.sk/e-shop/</a>	1

	Názov sa nenašiel	

#### O tomto SEO faktore:

Presmerovania 301 sú trvalé a zvyčajne sa používajú na riešenie problémov s duplikátom obsahu alebo na presmerovanie určitých adries URL, ktoré už nie sú potrebné. Použitie presmerovaní 301 je úplne legitímne a je dobré pre SEO, pretože presmerovanie 301 bude prepájať silu zo starej stránky na novú. Len nezabudnite presmerovať staré adresy URL na najrelevantnejšie stránky.

### Stránky s dlhými reťazcami presmerovania (2 stránky)

There are pages with long redirect chains (longer than 2 redirects) found on your website. It is strongly recommended to avoid more than 2 redirects in a redirect chain to make sure that your page is indexed properly by search engines.

URL stránka	# of redirects	Nájdené na
<a href="https://www.orange.sk/produkty-a-sluzby/volania/pausaly">https://www.orange.sk/produkty-a-sluzby/volania/pausaly</a>	5	70
<a href="https://www.orange.sk/e-shop">https://www.orange.sk/e-shop</a>	4	144

#### O tomto SEO faktore:

V určitých prípadoch, či už z dôvodu nesprávneho nastavenia súboru .htaccess alebo z dôvodu úmyselne prijatých opatrení, môže stránka skončiť s dvoma alebo viacerými presmerovaniami. Dôrazne sa odporúča vyhnúť takýmto reťazcom presmerovania dlhším ako 2 presmerovania, pretože môžu byť príčinou viacerých problémov:

- Existuje vysoké riziko, že stránka nebude indexovaná, pretože roboti Google neaplikujú viac ako 5 presmerovaní.
- Príliš veľa presmerovaní spomalí rýchlosť vašej stránky. Každé nové presmerovanie môže spomaliť rýchlosť načítania stránky až o niekoľko sekúnd.
- Vysoká miera odchodov: používatelia nie sú ochotní zostať na stránke, ktorej načítanie trvá dlhšie ako 3 sekundy.

### Stránky s meta refresh tagom (0 stránky)

Výborne! Na vašom webe sa nenašli žiadne meta refresh presmerovania.

#### O tomto SEO faktore:

Meta refresh možno v zásade považovať za porušenie pokynov spoločnosti Google pre kvalitu, a preto sa z hľadiska SEO neodporúča. Ako poznamenáva jeden zo zástupcov spoločnosti Google: „Vo všeobecnosti vám odporúčame nepoužívať presmerovania typu meta refresh, pretože to môže spôsobiť znepokojenie u používateľa (a vyhľadávacích nástrojov, ktorí by to mohli omylom považovať za pokus o presmerovanie)... Meta refresh momentálne nespôsobuje žiadne problémy, pokiaľ ide o indexové prehľadávanie, indexovanie alebo hodnotenie, stále by však bolo vhodné meta refresh odstrániť.“ Namiesto toho sa držte trvalého presmerovania 301.

## Stránky s rel="canonical" tagom (76 stránky)

Na vašom webe sa nachádzajú stránky s kanonickými adresami URL. Skontrolujte, či sú vaše značky rel = "canonical" alebo rel = "canonical" hlavičky HTTP nastavené správne.

Stránka	Canonical URL adresa
<a href="https://www.orange.sk/">https://www.orange.sk/</a> Vstúpte k najväčšiemu operátorovi na Slovensku   Orange	<a href="https://www.orange.sk/">https://www.orange.sk/</a>

#### O tomto SEO faktore:

Vo väčšine prípadov sa duplicitné adresy URL spracúvajú prostredníctvom presmerovaní 301. Avšak niekedy, napríklad, keď sa rovnaký produkt objaví v dvoch kategóriách s dvoma rôznymi adresami URL a obe musia byť živé, môžete pomocou značiek rel = "canonical" určiť, ktorá stránka by sa mala považovať za prioritu. Mal by byť správne implementovaný do značky

## ✔ Stránky HTTPS s problémami so zmiešaným s obsahom (0 stránky)

Well done! None of your HTTPS pages have mixed content issues.

---

### O tomto SEO faktore:

Použitie bezpečného šifrovania sa dôrazne odporúča pre mnoho webových stránok (napríklad pre tie, ktoré uskutočňujú transakcie a zhromažďujú citlivé informácie o používateľovi.) V mnohých prípadoch však webmasteri čelia technickým problémom pri prepínaní svojich webových stránok z protokolu HTTP na HTTPS. Jedným z týchto problémov je tzv. zmiešaný obsah - napr. keď vaše zabezpečené stránky HTTPS obsahujú nezabezpečený obsah zobrazovaný prostredníctvom protokolu HTTP.

Ak stránka HTTPS obsahuje obsah získaný prostredníctvom bežného HTTP s čistým textom, **oslabuje to bezpečnosť celej stránky**, pretože nešifrovaný obsah je prístupný pre snifferov a môže byť upravený tzv. útočníkmi typu "man-in-the-middle". Z tohto dôvodu sa v mnohých moderných prehliadačoch môže takýto **obsah zablokovať** pri načítaní s upozornením „nezabezpečené pripojenie“.

Podľa spoločnosti Google existujú dva typy zmiešaného obsahu:

aktívny a pasívny. Pasívny zmiešaný obsah sa týka obsahu, ktorý nereaguje so zvyškom stránky, a preto je útok typu "man-in-the-middle" obmedzený na to, čo môžu urobiť, ak sa tento obsah zachytí alebo zmení. Pasívny zmiešaný obsah zahŕňa obrázky, video a zvukový obsah spolu s ďalšími zdrojmi, ktoré nemôžu interagovať so zvyškom stránky. Aktívny zmiešaný obsah interaguje so stránkou ako celkom a umožňuje útočníkovi urobiť so stránkou takmer všetko. Aktívny zmiešaný obsah zahŕňa skripty, šablóny štýlov, prvky iframe, zdroje flash a ďalší kód, ktorý môže prehliadač stiahnuť a spustiť.

## ✔ Responzivita (Yes)

Výborne! Domovská stránka vašej stránky je prispôbená pre mobilné zariadenia.

---

### O tomto SEO faktore:

Podľa spoločnosti Google ovplyvňuje algoritmus prispôbený pre mobilné zariadenia vyhľadávanie vo všetkých jazykoch na celom svete a má výrazný vplyv na výsledky vyhľadávania v Google. Tento algoritmus funguje na základe jednotlivých stránok - nejde o to, ako sú vaše stránky prispôbené pre mobilné zariadenia, ale jednoducho o to, či sú mobile friendly alebo nie.

Algoritmus je založený na kritériách, ako: malé veľkosti písma, ciele/odkazy, čitateľnosť obsahu, atď.

## ✔ Stránky s viacerými canonical URL adresami (0 stránky)

Dobrá práca! Žiadna zo stránok vášho webu nemá viac canonical URL adries.

---

### O tomto SEO faktore:

Mať niekoľko canonical URL adries zadaných pre stránku je často v spojení s doplnkami SEO, ktoré často vkladajú predvolený odkaz rel = "canonical". Problém vyriešite opätovným skontrolovaním zdrojového kódu stránky a konfigurácie záhlaví HTTP rel = "canonical" HTTP. V prípade viacerých deklarácií rel = "canonical" bude Google pravdepodobne ignorovať všetky tzv. "rel=canonical hints", takže vaše úsilie vyhnúť sa duplicité s obsahom môže byť zbytočné.

## ✔ Stránky s frames (0 stránky)

Výborne! Vaše webové stránky neobsahujú frames.

---

### O tomto SEO faktore:

Frames umožňujú zobraziť viac ako jeden dokument HTML v rovnakom okne prehliadača. Výsledkom je, že v týchto dokumentoch chýba text a hypertextové odkazy (najdôležitejšie signály pre vyhľadávače). Ak používate frames, vyhľadávacie nástroje nedokážu správne indexovať váš obsah.

## ⊖ Stránky s chybami a upozorneniami HTML W3C ( - )

O tomto faktore nie sú k dispozícii žiadne údaje.

#### O tomto SEO faktore:

Overenie platnosti sa zvyčajne vykonáva prostredníctvom služby W3C Markup Validation Service. Aj keď dodržiavanie štandardov W3C nie je povinné a nebude mať priamy vplyv na SEO, zlý kód môže byť príčinou toho, že spoločnosť Google neindexuje váš dôležitý obsah správne. Odporúča sa opraviť nefunkčný kód vašich stránok, aby sa predišlo problémom s pavúkmi vyhľadávacích nástrojov.

## ⊖ Stránky s chybami a upozoreniami W3C CSS ( - )

O tomto faktore nie sú k dispozícii žiadne údaje.

#### O tomto SEO faktore:

Overenie platnosti sa zvyčajne vykonáva prostredníctvom služby W3C Markup Validation Service (W3C znamená World Wide Web Consortium). Štýly CSS sa používajú na riadenie návrhu a formátovania stránky a na oddelenie štýlov od štruktúry, čo nakoniec urýchľuje načítanie stránky. Chyby v CSS nemusia byť pre vyhľadávače také dôležité, môžu však viesť k nesprávnemu zobrazeniu vašej stránky návštevníkom, čo môže ovplyvniť mieru konverzie a odchodov. Uistite sa teda, že sa stránka zobrazuje vo všetkých dôležitých prehliadačoch (vrátane mobilných), ktoré sú pre vás dôležité.

## ⓘ Dofollow externé odkazy (1,040 odkazy)

Na webových stránkach sú odkazy na ďalšie stránky.

Upravte svoje sledované odkazy a uistite sa, že odkazujú na vysoko kvalitné a relevantné stránky. Odporúča sa odstrániť akékoľvek odkazy na stránky pochybnej kvality alebo ich doplniť znakom rel="nofollow". Ak chcete do odkazu pridať atribút nofollow, jednoducho napíšte rel="nofollow" bez <a href> do tagu.

Napríklad: <a rel="nofollow" href="https://www.priklad.sk">Príklad</a>.

a 540 odkazy viac

#### O tomto SEO faktore:

Jednoducho povedané, dofollow odkazy sú odkazy, ktorým chýba atribút rel="nofollow". Za takýmito odkazmi nasledujú vyhľadávacie nástroje a odovzdávajú PageRank (nezabudnite, že odkazy môžu byť tiež obmedzené hromadným sledovaním prostredníctvom tagu nofollow).

Aj keď nie je nič zlé na odkazovaní na iné stránky prostredníctvom odkazov dofollow, ak prepojíte rozsiahle odkazy na nerelevantné alebo nekvalitné stránky, vyhľadávacie nástroje môžu dospieť k záveru, že váš web predáva odkazy alebo sa podieľa na iných schémach odkazov a môže byť penalizovaný.

### **Prázdné ALT texty (549 attributes)**

Na vašom webe sú prázdné atribúty alt image. Vytvorte alternatívne texty, ktoré najlepšie popisujú obsah obrázka, a prípadne aj cieľové kľúčové slová.

URL stránka	URL adresa obrázka

#### O tomto SEO faktore:

Aj keď vyhľadávacie nástroje nedokážu prečítať text z obrázkov, atribúty alt (známe tiež ako „alternatívne atribúty“) pomáhajú vyhľadávateľovi porozumieť tomu, čo zobrazujú vaše obrázky.

Najlepšou praxou je **vytvoriť alternatívny text pre každý obrázok pomocou kľúčových slov v ňom**, ak je to možné, aby vyhľadávacie nástroje lepšie porozumeli obsahu vašich stránok dúfajúc, že vaše stránky budú vo výsledkoch vyhľadávania lepšie.

#### ✔ Príliš veľké stránky (0 stránky)

Dobrá práca! Veľkosť každej stránky je menšia ako 3MB.

#### O tomto SEO faktore:

Prírodzene existuje priama korelácia medzi veľkosťou stránky a jej rýchlosťou načítania, čo je zase jedným z mnohých faktorov hodnotenia. V

zásade sa preplnené stránky načítavajú dlhšie. Preto je všeobecným pravidlom udržiavať veľkosť stránky do 3 MB. Samozrejme, nie je to vždy možné. Napríklad, ak máte e-shop s veľkým počtom obrázkov, môžete ju posunúť na viac MB, ale to môže mať výrazný vplyv na čas načítania stránky pre používateľov s nízkou rýchlosťou pripojenia.

## ✔ Dynamické URL (0 stránky)

Na vašom webe sa nenašli žiadne dynamické adresy URL. Znamená to, že všetky adresy URL vašich webových stránok sú ľahko čitateľné pre používateľov a vyhľadávacie nástroje.

### O tomto SEO faktore:

URL adresy, ktoré obsahujú dynamické znaky, ako napríklad „?“ , „\_“ , nie sú užívateľsky prívetivé a sú ťažko zapamätateľné. Ak chcete zvýšiť šance svojich stránok na hodnotenie, je najlepšie nastaviť adresy URL tak, aby boli opisné a obsahovali kľúčové slová, nie čísla alebo parametre. Ako sa uvádza v pokynoch spoločnosti Google pre správcov webu, „adresy URL by mali byť kvôli osvedčeným postupom čisté a nemali by obsahovať dynamické znaky.“

## ✔ Príliš dlhé URL adresy (0 stránky)

Výborne! Dĺžka všetkých webových adries na vašom webe je v rámci odporúčaných limitov (do 115 znakov).

### O tomto SEO faktore:

Webové adresy s menej ako 115 znakmi sú ľahšie čitateľné koncovými používateľmi a vyhľadávacími nástrojmi a sú užívateľsky prívetivejšie.

## ⚠ Chybné odkazy (79 odkazy)

Na vašom webe sú niektoré odkazy nefunkčné. Môže to mať za následok zlé skúsenosť používateľov a signál pre vyhľadávače, že vaše stránky sú zanedbávané. Prezrite si tieto odkazy a opravte ich.

**O tomto SEO faktore:**

Nefunkčné odkazy môžu byť zlým signálom pre vyhľadávače a používateľov. Ak stránka obsahuje veľa nefunkčných odkazov, dospejú k záveru, že už nejaký čas nebola aktualizovaná. V dôsledku toho môže byť hodnotenie stránok znížené.

Aj keď 1-2 nefunkčné odkazy nespôsobia penalizáciu spoločnosťou Google, skúste pravidelne kontrolovať svoje webové stránky, opravovať nefunkčné odkazy (ak existujú) a uistiť sa, že ich počet sa nezvyšuje. Okrem toho sa používateľom bude páčiť váš web viac, ak im nezobrazí nefunkčné odkazy smerujúce na neexistujúce stránky.

** Stránky s nadmerným počtom odkazov (72 stránky)**

Na vašom webe sú stránky s viac ako 100 odchádzajúcimi odkazmi. Skontrolujte tieto stránky a ak je to možné, znížte počet odchádzajúcich odkazov.

Stránka	Celkový počet	Interné odkazy	Externé odkazy
<a href="https://www.orange.sk/produkty-a-sluzby/volania/volania-s-kreditom/prima-kids">https://www.orange.sk/produkty-a-sluzby/volania/volania-s-kreditom/prima-kids</a>	2,228	2,210	12

#### O tomto SEO faktore:

Podľa Matta Cuttsa (bývalý vedúci tímu spoločnosti Google pre webový spam) „...stále existuje dobrý dôvod ponechať menej ako 100 odkazov: lepšia používateľská skúsenosť. Ak sa na stránke zobrazuje viac ako 100 odkazov, môže to byť pre vašich používateľov zmatečné a zároveň znižuje používateľskú skúsenosť. Stránka pre vás môže vyzeráť dobre, pokiaľ si nenasadíte „klobúk používateľa“ a uvidíte, ako stránka vyzerá pre nového návštevníka.“ Aj keď Google stále hovorí o používateľských skúsenostiach, príliš veľa odkazov na stránke môže poškodiť vaše hodnotenie. Pravidlo je teda jednoduché: čím menej odkazov na stránke, tým menej problémov s jej poradím. Pokúste sa dodržať osvedčené postupy a udržujte počet odchádzajúcich odkazov (interných aj externých) do 100.

#### ✔ Prázdne TITLE tagy (0 stránky)

Výborne! Všetky vaše stránky majú značku <title> a všetky značky nadpisov obsahujú obsah.

#### O tomto SEO faktore:

Ak stránka nemá vyplnený názov alebo je značka názvu prázdna (v kóde vyzerá takto: <title></title>), spoločnosť Google a ďalšie vyhľadávacie nástroje sa sami rozhodnú, ktorý text sa zobrazí ako názov vašej stránky v úryvkoch SERP. To znamená, že nebudete mať kontrolu nad tým, čo ľudiavidia vo vyhľadávači Google, keď nájdu vašu stránku.

Preto vždy, keď vytvárate novú webovú stránku, nezabudnite pridať optimalizovaný názov, ktorý by bol atraktívny aj pre používateľov.

#### ✘ Duplicitné TITLE tagy (4 stránky)

Niektoré vaše stránky majú identické (duplicitné) title. Prosím skontrolujte problematické stránky a upravte titles tak, aby boli jedinečné.

URL stránka	Nadpis
<a href="https://www.orange.sk/moj-orange/web/">https://www.orange.sk/moj-orange/web/</a>	Orange zákaznícka zóna
<a href="https://www.orange.sk/moj-">https://www.orange.sk/moj-</a>	Orange zákaznícka zóna

[orange/web/spotreba](#)

<https://www.orange.sk/moj-orange/web/faktury>

Orange zákaznícka zóna

<https://www.orange.sk/moj-orange/web/produkty-a-sluzby>

Orange zákaznícka zóna

#### O tomto SEO faktore:

Názov stránky sa považuje za najdôležitejší prvok na stránke. Je to silný signál relevantnosti pre vyhľadávače, pretože im hovorí, o čom stránka skutočne je. Je samozrejme dôležité, aby názov obsahoval vaše najrelevantnejšie kľúčové slovo. Okrem toho by však každá stránka mala mať jedinečný názov, aby sa zabezpečilo, že vyhľadávacie nástroje nebudú mať problém pri určovaní, ktorá z webových stránok je pre dopyt relevantná. Stránky s duplicitnými názvami majú menšie šance na vysoké hodnotenie. Ak váš web obsahuje stránky s duplicitnými názvami, môže to mať negatívny vplyv aj na hodnotenie iných stránok.

### ✔ Príliš dlhé TITLE tagy (0 stránky)

Well done! All titles on your website are within the required length limits (up to 70 symbols).

#### O tomto SEO faktore:

Každá stránka by mala mať jedinečný názov bohatý na kľúčové slová. Zároveň by ste sa mali pokúsiť udržať stručné štítky názvov. Nadpisy, ktoré sú dlhšie ako 70 znakov, budú vyhľadávacími nástrojmi skrátené a vo výsledkoch vyhľadávania budú pôsobiť nepríťažlivo. Aj keď sú vaše stránky vo vyhľadávačoch na prvej strane, ich názvy sú skrátené alebo neúplné, nezískajú toľko kliknutí, koľko by inak získali.

### ⚠ Prázdne DESCRIPTION tagy (4 stránky)

Niektoré z vašich stránok nemajú meta popisy. Skontrolujte tieto stránky a v prípade potreby vytvorte meta popisy.

#### O tomto SEO faktore:

Aj keď meta popisy nemajú priamy vplyv na hodnotenie, sú stále dôležité, pretože vytvárajú úryvok textu, ktorý ľudia vidia vo výsledkoch vyhľadávania. Meta popis by mal „predať“ webovú stránku užívateľovi a povzbudiť ho k návšteve stránky.

Ak je meta popis prázdny, vyhľadávacie nástroje sa sami rozhodnú, čo zahrnú do útržku.

### ✘ Duplicitné DESCRIPTION tagy (6 stránky)

Niektoré vaše stránky majú identické (duplicitné) descriptions. Prosím skontrolujte problematické stránky a upravte ich tak, aby boli popisy na stránkach jedinečné.

Internet a TV | Orange

Orange Slovensko je najväčším telekomunikačným operátorom na Slovensku. Má takmer 3 milióny aktívnych zákazníkov mobilnej siete, ktorej signálom pokrýva 99,6 % populácie a 87,3 % územia SR.

<https://www.orange.sk/produkty-a-sluzby/televizia/tv-technologie>

Orange ponuka TV | Orange

Orange Slovensko je najväčším telekomunikačným operátorom na Slovensku. Má takmer 3 milióny aktívnych zákazníkov mobilnej siete, ktorej signálom pokrýva 99,6 % populácie a 87,3 % územia SR.

#### O tomto SEO faktore:

Podľa Matta Cuttsa je lepšie mať jedinečné meta popisy, ba dokonca je lepšie mať meta popisy prázdne, ako duplicitné na svojich stránkach. Preto sa uistite, že vaše najdôležitejšie stránky majú jedinečný a optimalizovaný popis stránky.

#### Príliš dlhé DESCRIPTION tagy (16 stránky)

Some meta descriptions on your website are longer than 160 characters. They will be cut by search engines and as a result will look unappealing to users. Please review the problematic descriptions, and rewrite them.

For a meta description, use a maximum of 160 characters, while longer meta descriptions will get truncated by search engines.

**O tomto SEO faktore:**

Aj keď meta popisy nemajú priamy vplyv na hodnotenie, sú stále dôležité, pretože vytvárajú úryvok, ktorý ľudia vidia vo výsledkoch vyhľadávania. Preto by popisy mali „predávať“ webovú stránku hľadajúcim a nabádať ich, aby na ne klikli. Ak je popis meta príliš dlhý, vyhľadávací nástroj ho skráti a používateľom sa môže zdať neatraktívny.

 **Jazykové verzie (0 varianty)**

Webové stránky neobsahujú žiadne stránky špecifické pre daný jazyk alebo región.

**O tomto SEO faktore:**

Ak máte viacjazyčnú webovú stránku s rôznymi regionálnymi verziami stránky, existuje dobrý spôsob, ako vyhľadávacím nástrojom povedať tieto lokalizované variácie pomocou prvkov hreflang.

V tejto časti si môžete prezrieť zoznam všetkých hodnôt hreflang, ktoré boli nájdené na stránkach vašej domény. Môžete tiež skontrolovať pokyny

spoločnosti Google (<https://support.google.com/webmasters/answer/189077>) pre viacjazyčné webové stránky o tom, ako správne používať prvky hreflang.

## ✔ Stránky s prvkami hreflang (0 ks)

Webové stránky neobsahujú žiadne stránky špecifické pre daný jazyk alebo región.

### O tomto SEO faktore:

Tento faktor kontroluje a overuje prvky hreflang, ktoré sa použili na stránkach domény projektu. WebSite Auditor pre každú stránku poskytuje podrobnú správu o nesprávnom použití prvkov hreflang a ich hodnotách.

## ✔ Nesprávne kódy jazyka (0 ks)

Blahoželáme! Všetky vaše prvky hreflang majú správne hodnoty.

### O tomto SEO faktore:

Tento faktor analyzuje a overuje hodnoty všetkých prvkov hreflang nachádzajúcich sa na vašich stránkach. Jednou z najbežnejších chýb je použitie nesprávnych hodnôt jazyka a krajiny pre anotácie hreflang, napríklad: „en-UK“ namiesto „en-GB“. Všetky hodnoty hreflang by mali byť v súlade s normami ISO 639-1 ([https://en.wikipedia.org/wiki/List\\_of\\_ISO\\_639-1\\_codes](https://en.wikipedia.org/wiki/List_of_ISO_639-1_codes)), ak sú špecifikované iba jazykové verzie stránky, alebo podľa normy ISO 3166-1 Alpha 2 ([https://en.wikipedia.org/wiki/ISO\\_3166-1\\_alpha-2](https://en.wikipedia.org/wiki/ISO_3166-1_alpha-2)), ak sú uvedené jazykové verzie a verzie krajín. Hodnotu „x-default“ môžete použiť aj pre stránky, ktoré nemajú inú vhodnejšiu verziu jazyka / oblasti.

## ✔ Neplatné URL adresy (0 ks)

Dobrá práca! Všetky vaše prvky hreflang majú správny formát adresy URL.

### O tomto SEO faktore:

Faktor potvrdzuje všetky adresy URL, ktoré sa používajú v hreflang attributes na vašich webových stránkach. Nezabudnite použiť plne kvalifikované adresy URL pre každú jazykovú / regionálnu verziu stránky vrátane protokolu „http://“ alebo „https://“. Nie je dovolené používať relatívne URL pre atribúty hreflang.

## ✔ Chýbajúce spätočné odkazy (0 ks)

Webové stránky neobsahujú žiadne stránky špecifické pre daný jazyk alebo región.

### O tomto SEO faktore:

Každá jazyková verzia stránky by mala mať atribúty hreflang, ktoré odkazujú na samotnú stránku a tiež na ďalšie jazykové/regionálne verzie stránky. Vyžaduje sa tiež, aby všetky jazykové verzie regiónov smerovali k sebe navzájom vo svojich atribútoch hreflang.

**Príklad:** Existuje stránka v angličtine (en) s 2 ďalšími jazykovými variantami - ruština (ru) a nemčina (de). Hlavná časť anglickej verzie (en) by mala obsahovať 3 prvky hreflang: jeden smerujúci k samotnej anglickej verzii a 2 ďalšie smerujúce na ruskú (ru) a nemeckú (de) stránku. Nemecká (de) aj ruská (ru) varianta by mala mať tiež 3 hreflang prvky, ktoré odkazujú späť na anglickú verziu, navzájom k sebe a tiež sa musia uviesť v atribútoch hreflang. V opačnom prípade, ak stránky neodkazujú na seba, vyhľadávacie nástroje ignorujú ich atribúty hreflang.

## ✔ Zle zadefinované hreflang prvky (0 ks)

Webové stránky neobsahujú žiadne stránky špecifické pre daný jazyk alebo región.

### O tomto SEO faktore:

Tento faktor kontroluje konfliktné hodnoty hreflang: Variantu jazyka stránky by mal mať priradený iba jeden atribút jazyka hreflang (napr.: stránka by nemala mať hodnoty „en“ aj „de“ hreflang). Aj keď je možné priradiť rovnaký jazyk, ale s rôznymi regiónmi: en-US a en-GB.

## ✔ Non-canonical stránky s prvkami hreflang (0 ks)

Webové stránky neobsahujú žiadne stránky špecifické pre daný jazyk alebo región.

### O tomto SEO faktore:

Tento faktor uvádza všetky stránky, ktoré majú atribúty hreflang, ale súčasne používajú kanonický prvok, ktorý odkazuje na inú stránku. Takáto kombinácia prvkov môže zmiatť vyhľadávacie nástroje, pretože navrhuje rôzne adresy URL na indexáciu. Najlepšie je odstrániť canonical tag alebo prepojiť kanonický prvok so samotnou stránkou.

## ✔ Chýbajúca hodnota "x-default" (0 ks)

Webové stránky neobsahujú žiadne stránky špecifické pre daný jazyk alebo región.

### O tomto SEO faktore:

Tento faktor kontroluje stránky, ktoré používajú prvky hreflang bez hodnoty „x-default“. Použitie „x-default“ nie je povinné, ale je to dobrý spôsob, ako povedať vyhľadávacím nástrojom, akú verziu stránky by mala používať pre jazyky a regióny, ktoré neboli definované prostredníctvom vašich atribútov hreflang.

## ✔ Neúplné hodnoty hreflang (0 ks)

Webové stránky neobsahujú žiadne stránky špecifické pre daný jazyk alebo región.

### O tomto SEO faktore:

Tento faktor analyzuje všetky stránky, ktoré používajú atribúty hreflang v jazykovej oblasti, a overuje, že všetky tieto stránky majú tiež hodnotu „x-default“ a poskytujú všeobecnú adresu URL pre geograficky nešpecifikovaných používateľov toho istého jazyka. Príklad: Stránka môže mať špecifické varianty pre anglicky hovoriacich používateľov z Kanady (en-Ca) a Austrálie (en-Au), ale musíte zadať aj všeobecnú adresu URL, ktorá sa použije pre anglicky hovoriacich používateľov z iných krajín.
